

1998 Homeokinetics Conference

July 24-26, 1998

University of Connecticut

Thomas Dodd Research Center

Storrs, Connecticut

Sponsored by:

International Society for Ecological Psychology (ISEP)
NBS/NIST Standards Alumni Association

This conference celebrates the 80th birthday of Dr. Arthur S. Iberall by bringing together researchers interested in the science of *Homeokinetics*. Today, in our highly complex and almost out-of-control world, there is a widespread need for a homeokinetic physics that explains the application of physics to complex systems. Nowhere else has there been a place that brings together physicists, biologists, geologists, anthropologists, physiologists, biomedical engineers, economists, and political scientists, all of whom are stretching the edges of their fields to learn a common vocabulary grounded in physics in order to understand how complex systems work.

PRELIMINARY PROGRAM

Physics
