DISCLAIMER

This handbook is produced by the Daniel J. Epstein Department of Industrial and Systems Engineering as an unofficial guide to graduate studies in the department. The source for much of the information in this booklet is the *USC Catalogue*, the document of authority for all students of the University of Southern California. Degree requirements listed in the *USC Catalogue* supersede any information which may be contained in any bulletin of any school or department. The *USC Catalogue* is updated and published annually by the University of Southern California. Other sources for information contained in this booklet are the *School of Engineering Bulletin*, the *Schedule of Classes*, and the *SCampus*. The student is referred to these publications for the definitive answers to any questions whether or not they are covered in this booklet. Matters of department policy not covered in the above publications may be referred to the ISE Educational Services Coordinator or to the ISE Faculty.

Although the University of Southern California, the School of Engineering, and the Daniel J. Epstein Department of Industrial and Systems Engineering have many resources to help each student achieve his/her desired education and training goals, it is ultimately the student's responsibility to see that all requirements for graduation are satisfied.

"Students are expected to be familiar with university policies and to monitor their own academic progress. They should keep all records of official grades earned, degree requirements met, transfer credits accepted and actions taken on requests for substitutions or exceptions to university policies and regulations."

--*USC Catalogue*

DANIEL J. EPSTEIN DEPARTMENT OF INDUSTRIAL AND SYSTEMS ENGINEERING

In today's economy, successful graduates need to be skilled in technology, computing and business. To get these skills, there is no better major than Industrial and Systems Engineering (ISE), and there is no better place to study Industrial and Systems Engineering than University of Southern California (USC). USC graduates

- Design and implement information systems to control supply chains, production equipment and business operations.
- Lead development projects for computers, software, communication equipment and bio-tech devices
- Manage technology workers in design firms, manufacturers, and service organizations, such as hospitals and airlines.
- Create human/computer interfaces and inventing technology to meet human needs.

A graduate degree from USC's ISE Department enables students to enter careers in technology management, information systems, consulting, automation and optimization.

WHY USC

Students come to USC because of our academics and innovative programs, but we also offer:

- Outstanding, well-paid, career opportunities in California's high-tech economy.
- Personal contact with a top-ranked faculty, who are both world-renowned researchers and experienced engineers.
- A modern and challenging curriculum emphasizing information technology
- Top students who are attracted to Los Angeles' international economy from around the world.
- For graduate students, a range of degree and course options, with choices for students coming from any engineering or technical major.

Students also choose USC because of its leadership in ISE research. Our faculty works with the National Science Foundation, the Integrated Media Systems Center (based at USC) and private companies, to stay at the forefront of innovation in software, control systems and engineering management.

USC's research leadership is reflected in our faculty's membership in the prestigious National Academy of Engineering, publications in leading journals and patents for innovative computer based technologies.

GRADUATE DEGREES OFFERED

USC has choices for students with, and without, undergraduate ISE degrees. All choices give students the training they need within a short period of time. Full-time students can complete master degrees in three semesters or less; part-time students in five semesters or less.

Master of Science Degrees

Masters in Engineering Management is a joint ISE/business program that prepares students to lead technology projects and manage technology companies. The degree is especially well suited for students who have several years of work experience and are preparing to move into engineering management. Engineering Management courses are offered at night and through Distance Education, so students can enroll while continuing employment (Open to grads from all engineering and technical majors.)

Masters in Industrial and Systems Engineering prepares students to become technical leaders in industrial engineering.

Masters in Industrial and Systems Engineering/MBA is for students who want an extended graduate program with depth in both business and engineering. (For students who have an undergrad degree in industrial engineering, production engineering or equivalent; other students may enroll while satisfying pre-requisites.)

Masters in Manufacturing Engineering educates students in modern manufacturing methods and control systems. (Primarily for students with undergrad degrees in industrial, manufacturing, mechanical, or production engineering.)

Masters in Operations Research Engineering trains students in solving business problems with computers and mathematics. (Open to graduates from all engineering and technical majors).

Masters in Product Development Engineering is a joint program with the Aerospace and Mechanical Engineering Department that prepares engineers to become leaders in engineering design and new product development.

Masters in Systems Architecture and Engineering is a flexible program for students who want to customize their curriculum in systems engineering. (Open to graduates from all engineering majors).

Masters in Systems Safety and Security is an interdisciplinary program, combining courses from the Viterbi School of Engineering and School of Policy, Planning and Development. The program is designed to train students in homeland security-related subjects. (Open to graduates from all engineering and science majors).

Engineer Degree

The Engineer degree is awarded under the jurisdiction of the School of Engineering, and is intended for students who wish to continue their coursework beyond the normal M.S. degree, but do not wish to complete the research requirements of the Ph.D.

Doctor of Philosophy (Ph.D.)

The Ph.D. program prepares students for leadership in Industrial and Systems Engineering research and university-level education. In addition to meeting course requirements, students spend one or more years on PhD dissertation research. Students must complete a master degree before enrolling in the PhD program. Policies for the Ph.D. are described in a separate publication available from the department.

QUALIFICATIONS FOR ADMISSION

Graduate applications are individually reviewed by faculty, who consider academic preparation, grade point average, test scores, work experience, statements of purpose and letters of recommendation. Admission is competitive. Applicants must generally meet the following minimum standards, though satisfaction of these standards does not guarantee admission. However, conditional admission is sometimes granted when students are deficient in one area, but compensate in others. Therefore, students are still encouraged to apply if some, but not all, qualifications are satisfied.

1. A Bachelor of Science degree in engineering, mathematics, sciences or related fields is required for master's degree programs. Applicants to the MS ISE or MS ISE/MBA are expected to hold an undergraduate degree in Industrial Engineering, Production Engineering, or equivalent. A Master of Science in engineering is required for the Engineer degree and the Ph.D. Other majors may be accepted on a case-by-case basis. Applicants who do not meet pre-requisite requirements may be conditionally admitted and must complete any and all course deficiencies prior to being admitted to regular student status.

2. Overall undergraduate GPA of 3.0 or better on a 4.0-scale, or "better than average" academic performance.
3. Satisfactory performance in any prior graduate work.

4. Satisfactory scores on the Graduate Record Examination (GRE). Minimum standards are:

GRE General Exam	EMT	ISE	MFE	ORE	PDE	SAE	SYSS	ENGR	Ph.D.
Minimum Verbal	350	350	350	350	400	400	400	350	500
Minimum Quantitative	650	650	600	650	650	650	650	650	700
Verbal + Quantitative	1050	1050	1050	1050	1050	1050	1050	1050	1200

The GRE Subject Examination is not required for any Industrial and Systems Engineering Graduate program.

5. For International Students whose first language is not English, a minimum Test of English as a Foreign Language (TOEFL) score of 550 is required for admission. A minimum TOEFL score of 600 is required to be excused from English language course requirements. All students receiving Teaching Assistantships must demonstrate adequate spoken English skills.
6. Three letters of recommendation are required for Engineer and Ph.D. applications. Letters should comment on the applicant's aptitude and capabilities for pursuing graduate studies, including an assessment of ability to conduct innovative research. Letters of recommendation are encouraged, but not required, for M.S. degrees.

FINANCIAL AID AT USC

Financial assistance is administered on three levels at USC:

1. **University Level** (via The Graduate School). The Graduate School publishes the *Guide to Graduate Aid*. Fellowships are available. The completed Graduate Fellowship Application Form should be returned to the Department for processing. The Graduate School also accepts department nominations for scholarships.
2. **School Level** (via the School of Engineering). The Dean and the Director of Graduate Studies of the School of Engineering review information from University Admissions to make awards to qualified candidates.
3. **Department Level** (via the Industrial and Systems Engineering Department). A limited number of Teaching and Research Assistantships are available to highly qualified graduate students. Assistantships consist of a stipend (academic year only) plus a tuition award. Applications are available by writing to the Industrial and Systems Engineering Department. Teaching Assistantships require demonstrated English proficiency. Research Assistantships may be offered to qualified applicants whose research interests are compatible with research currently underway in the Department. Preference will be given to continuing students. To be considered for financial aid, all application materials (including letters of reference, statement of purpose, and GRE scores) must be received by February 1. Teaching assistantships are awarded only in the fall.

All of the above are extremely competitive. Graduate School aid and School of Engineering aid are primarily awarded to American citizens. Applicants interested in financial assistance should have qualifications well beyond the minimum requirements for admission.

Other Sources of Financial Aid

Financial aid is offered by many privately- and publicly-funded organizations. A number of scholarships are available to specifically promote women in higher education.

The Institute of International Education publishes *Funding for U.S. Study: A Guide for Foreign Nationals*, which lists over 600 grants and scholarships for which foreign nationals may apply. Awards are sponsored by both private and public sources. Awards sponsored by individual colleges and universities, however, are not included. For further information, contact: Educational Associate Member Services, Institute of International Education, 809 United Nations Plaza, New York, New York 10017, USA.

A Selected List of Fellowship Opportunities and Aids to Advanced Education for U.S. Citizens and Foreign Nationals is available from: The Publications Office, National Science Foundation, 4201 Wilson Blvd., Arlington, VA 22230

Employment

Many students are employed by the University while pursuing their graduate degrees. The USC Personnel Office and the Career Development Center have listings of full- and part-time on- and off-campus employment opportunities, which are widely available in Los Angeles (the second largest city in the United States). Many ISE students secure summer internships, which are frequently available to foreign students after completing a 9-month residency period in the United States.

APPLICATION AND ADMISSION PROCESS

Application Process

Applications to USC can be submitted online at <http://www.usc.edu/students/admission/>. Application forms are also available from the Graduate and International Admissions Office. The forms must be filled out completely with all supporting documentation provided. Examination scores should be sent to USC by the testing agency. International students must provide an affidavit of financial support. Application fees may not be waived. Applicants who file incomplete applications will be notified in writing of any deficiencies.

Applications are reviewed by the Admissions Office and by the ISE Department. Complete applications are processed in three to six weeks. It is very important to ensure that all required documents are provided, as decisions cannot be made until all material is received.

Graduate Application Package List

- Statement of Purpose
- Three Letters of Recommendation (required for PhD applicants; not required, but highly recommended for MS applicants)
- Graduate application form
- Official transcript(s)
- GRE scores
- TOEFL scores (required for International Students)
- Financial Statement (required for International Students)

Limited Status Enrollment

Students may take classes without being admitted to a degree program as a Limited Status Student. Students who have been denied admission to a USC degree program may not take classes in that degree program. A maximum of twelve units taken as a Limited Status Student may be applied toward a graduate degree. Successful completion of courses under limited status does not guarantee admission to ISE degree programs. Students who are interested in pursuing a graduate degree should not delay their application.

Admission

Applicants will be notified in writing once a decision has been reached. Admitted applicants will receive further information on orientation programs, housing, and campus life.

Conditional Admission

Applicants who do not meet admission qualifications may be granted conditional admission. Conditionally admitted students will be notified in writing of their admission status and of the conditions which must be satisfied to gain regular student status. Students must typically satisfy the admission conditions in the first semester of study.

International Students

USC provides excellent support for international students to assist in their transition to the United States. International students admitted to USC will be provided with either the I-20 or the IAP-66 Eligibility Certificates. After receiving this, the student must apply through a United States Embassy or Consulate for a visa to enter the United States. Students should plan on arriving in Los Angeles with ample time to arrange for housing and registration prior to the first day of classes.

COMMON REQUIREMENTS FOR MASTER'S DEGREES

Advisement

All graduate students in the Industrial and Systems Engineering Department are expected to see their advisors at least once per semester to plan courses and to ensure satisfactory degree progress.

Transfer Credit

The maximum number of transfer credits which may be applied toward a master's degree, subject to departmental approval is four units in degree programs requiring 24-32 units; eight units in programs requiring 33-40 units; 12 units in programs requiring 41 or more units. The same limits apply if a student wishes to transfer credits from any advanced degree previously completed at USC toward a master's degree.

- A maximum of four units of transfer credit may be applied toward an approved dual degree program.
- A maximum of twelve units of credit may be applied from courses taken as a Limited Status Student.
- Students should arrange for any transfer of credits during the first semester of enrollment at USC.

Time Limit

No course work that is older than seven years may be applied toward the master's degree. The master's degree must be completed within five calendar years of taking the first course applied to the program.

Undergraduate Deficiencies

A student must satisfactorily complete all undergraduate prerequisites prior to enrolling in graduate level courses.

Directed Research

No more than 12 units of directed research, 590, may be applied toward the master's degree.

Residency

Students must complete a minimum of 20 units at USC. The last four units of courses must be at USC.

Grade Point Average Requirement

Students must maintain an overall 3.0 GPA on 400-level and above work attempted at USC beyond the bachelor's degree to graduate. A minimum grade of C (2.0) is required in a course to receive graduate credit. Transfer units count as credit (CR) and are not calculated in the GPA.

Graduation

At the beginning of the last semester, students should file an Application for Master's Degree with the Graduate Study Office OHE 330G. This will alert the School and the University that you are prepared to receive your degree and initiate the degree check process, verifying that all academic and administrative requirements are met.

Leave of Absence

A student who must suspend his/her studies for a semester or more must file for a leave of absence with the Graduate Studies Office, OHE 330G, and withdraw from classes before the last day to drop classes without a mark of W (published in the Schedule of Classes). Students who miss the deadline for a leave of absence may still withdraw from classes with a mark of W but must apply for readmission to the program.

MASTER OF SCIENCE IN ENGINEERING MANAGEMENT (MSEMT)

The MS EMT program is designed for students who have some work experience and are preparing to take on managerial or project leadership responsibility. Program admission is flexible. Applicants to the program are expected to have a degree in either engineering or equivalent with undergraduate course work in engineering economy. Admitted students who do not meet the course work requirements will be assigned courses to complete the deficiencies.

A total of 30 units are required for the degree, of which at least 18 units must be completed in the Industrial and Systems Engineering Department. Twenty of the 30 units must also be at the 500 level or above.

Prerequisites:

Engineering Economy

Required Courses (At least one course from each of the 7 areas listed below): 21 Units

Accounting:

GSBA 510 Accounting Concepts and Financial Reporting (3)

GSBA 518 Accounting Control Systems (3)

Projects and Teams:

ISE 515 Engineering Project Management (3)

ISE 544 Management of Engineering Teams (3)

Technology:

ISE 545 Technology Development and Implementation (3)

ISE 555 Invention and Technology Development (3) (available beginning Spring 2004)

ISE 585 Strategic Management of Technology (3)

Information Systems:

IOM 535 Database Management (3)

ISE 582 Web Technology for Industrial Engineering (3)

ISE 583 Enterprise Wide Information Systems (3, available beginning Spring 2004)

Engineering Economy:

ISE 561 Economic Analysis of Engineering Projects (3)

ISE 562 Value and Decision Theory (3)

ISE 563 Financial Engineering (3)

Enterprises:

ISE 517 The Modern Enterprise Systems (3)

ISE 527 Advanced Quality Control (3)

ISE 550 Engineering Management of Government-Funded Programs (3)

ISE 564 Performance Analysis (3)

SAE 551 Lean Operations (3)

Quantitative Methods:

ISE 513 Inventory Systems (3)

ISE 514 Advanced Production Planning and Scheduling (3)

ISE 525 Design of Experiments (3)

ISE 530 Introduction to Operations Research (3)

ISE 580 Advanced Concepts in Computer Simulation (3)

Advisor-Approved Electives: 9 units

TOTAL 30 units

MASTER OF SCIENCE IN INDUSTRIAL AND SYSTEMS ENGINEERING (MSISE)

The MSISE program is for students who want to become technical leaders in the field of Industrial and Systems Engineering. The program consists of 30 units: two required courses, five courses chosen from a list of ISE electives, and two courses are electives chosen in conjunction with a faculty advisor. Eighteen units *must* be earned in the ISE Department. Twenty units *must* be at the 500 level or above. Entering students should possess a bachelor degree in Industrial Engineering or equivalent (represented by the following pre-requisites).

Prerequisites

- Computing
- Engineering Probability
- Engineering Statistics
- Engineering Economy

400- and 500-level courses may be counted for credit toward the master's degree, subject to department approval and any other restricted courses noted in the USC Catalogue.

All 400- and 500-level courses are counted toward the overall GPA requirement.

Required Courses:

ISE 514	Advanced Production Planning and Scheduling (3)
ISE 515	Engineering Project Management (3)

6 Units

At least one course from each of the 5 areas listed below:

Systems Design:

ISE 525	Design of Experiments (3)
ISE 527	Quality Management for Engineers (3)
ISE 541	Systems Engineering Theory and Practice (3)
SAE 549	Systems Architecting (3)

Production:

ISE 511L	Computer Aided Manufacturing (3)
ISE 513	Inventory Systems (3)
ISE 517	Modern Enterprise Systems (3)
SAE 551	Lean Operations (3)

Systems Performance:

ISE 544	Management of Engineering Teams (3)
ISE 564	Performance Analysis (3)
ISE 570	Human Factors in Engineering (3)

Information Systems:

ISE 580	Advanced Concepts in Computer Simulation (3)
ISE 582	Web Technology for Industrial Engineering (3)
ISE 583	Enterprise Wide Information Systems (3)

Quantitative Methods:

ISE 532	Network Flows (3)
ISE 536	Linear Programming and Extensions (3)
ISE 538	Elements of Stochastic Processes (3)
ISE 563	Financial Engineering (3)

15 Units

Advisor-Approved Electives:

TOTAL

9units

30 units

MASTER OF SCIENCE IN MANUFACTURING ENGINEERING (MSMFE)

The MSMFE degree is designed to educate students in the needs of modern, up-to-date manufacturing. MSMFE students learn how to design, install, and operate complex manufacturing systems composed of people, materials, automated machines, and information systems. The Departments of Aerospace Engineering, Computer Science, Electrical Engineering, Industrial and Systems Engineering, Materials Science, Mechanical Engineering, and Marshall School of Business participate in the Manufacturing Engineering Program. Entering students ordinarily possess undergraduate degrees in industrial engineering, manufacturing engineering, mechanical engineering or production engineering.

The Program consists of 30 units. A minimum of 21 units must be at the 500 level or above. A maximum of 6 units of electives may be taken from non-engineering departments. At least three courses must be taken in the student's selected area of specialization.

Prerequisites:

- Calculus I
- Calculus II
- Calculus III
- Science
- Computer Engineering (Pascal, Fortran, C)
- Materials Science or General Chemistry

Required Courses

12 units

ISE 511L	Computer Aided Manufacturing (3)	
ISE 517	The Modern Manufacturing Enterprise System (3)	
ISE 525	Design of Experiments or	
AME 525	Engineering Analysis (3)	
CSCI 585	Engineering Database Systems or	
EE 450	Introduction to Computer Networks	(3)

Approved electives

18 units

MASTER OF SCIENCE IN OPERATIONS RESEARCH ENGINEERING (MSORE)

The MSORE degree is for students who hold a bachelor's degree in engineering, mathematics, science or related fields, who would like to enter careers in the use of computers and mathematics in solving business problems. The 30 unit program must include at least 21 units of industrial and systems engineering courses related to operations research and 9 units of approved electives. Students will be required to make up deficiencies in mathematics and statistics. Additional courses or examinations may be required at the discretion of the department before full admission to the program

Prerequisites:

- Calculus I
- Calculus II
- Calculus III
- Linear Algebra
- Programming Language (Pascal, Fortran, C)
- Engineering Probability
- Engineering Economy
- Engineering Statistics
- System Simulation

Required Courses:

15 units

- ISE 532 Network Flows (3)
- ISE 536 Linear Programming and Extensions (3)
- ISE 538 Elements of Stochastic Processes (3)
- ISE 580 Advanced Concepts in Computer Simulation (3)

MASTER OF SCIENCE IN PRODUCT DEVELOPMENT ENGINEERING (MSPDE)

The MSPDE is a joint program with the Aerospace and Mechanical Engineering (AME) Department that prepares engineers to become leaders in engineering design and new product development. The MSPDE program offers two Areas of Specialization (AOS), namely Product Development Technology (PDT) and Product Development Systems (PDS). The PDT specialization will prepare students for a career as product development chief engineer, while the PDS specialization will prepare students as future product development project managers. Student entering this program must declare their choice of an AOS at admission. The degree is also available for remote students through USC's Distance Education Network (DEN). For more information about DEN, go to <http://den.usc.edu>

Program is administered by the AME Department. Contact Marrietta Penoliar at (213)740-5353 or marriett@usc.edu or check the MSPDE website at <http://mspde.usc.edu> for more details.

Prerequisites:

A bachelor's degree in an area of engineering or science;
Senior level coursework in either Engineering Design or Engineering Economy

Required Courses

6 units

AME 503 Advanced Mechanical Design (3)
ISE 545 Technology Development and Implementation (3)

Choose one area of specialization (AOS):

12 units

PDT Specialization

Required courses for PDT specialization (6 units):

AME 505 Engineering Information Modeling (3)
AME 525 Engineering Analysis (3) **OR**
AME 526 Engineering Analytical Methods (3)

Technical Elective courses for PDT specialization (6 units)

AME408 Computer-aided Design of Mechanical Systems (3)
AME410 Engineering Design Theory and Methodology (3)
AME481 Aircraft Design (3)
AME501 Spacecraft System Design (3)
AME504 Metallurgical Design (3)
AME506 Design of Low Cost Space Missions (3)
AME527 Elements of Vehicle and Energy Systems Design (3)
AME528 Elements of Composite Structure Design (3)
AME544 Computer Control of Mechanical Systems (3)
AME556 Systems Architecture Design Experience (3)
AME588 Materials Selection (3)
CE550 Computer-Aided Engineering (3)
CE551 Computer Aided Engineering Project (3)
SAE549 Systems Architecting (3)

PDS SpecializationRequired courses for PDS specialization (6 units):

ISE 515	Engineering Project Management (3)
ISE 544	Management of Engineering Teams (3)

Technical Elective courses for PDT specialization (6 units):

ISE460	Engineering Economy (3)
ISE470	Human Computer Interface Design (3)
ISE511	Computer Aided Manufacturing (3)
ISE517	Modern Enterprise Systems (3)
ISE525	Design of Experiments (3)
ISE527	Quality Management for Engineers (3)
ISE528	Advanced Statistical Aspects of Engineering Reliability (3)
ISE541	System Engineering Theory and Practice (3)
ISE555	Invention and Technology Development (3)
ISE561	Economic Analysis of Engineering Projects (3)
ISE580	Advanced Concepts in Computer Simulation (3)
ISE585	Strategic Management of Technology (3)

Approved electives**9 units**

Departmental approval is required for courses not listed.

TOTAL**27 units**

MASTER OF SCIENCE IN SYSTEMS ARCHITECTURE AND ENGINEERING (MSSAE)

The program is recommended to graduate engineers and engineering managers responsible for the conception and implementation of complex systems. This program is not recommended for recent bachelor's degree graduates.

Prerequisites:

Bachelor's degree in an engineering field
A minimum of three years systems experience

Courses:

SAE 549 Systems Architecting (3)
ISE 460 Engineering Economy (3) OR
ISE 561 Economic Analysis of Engineering Projects (3)
ISE 541 Systems Engineering Theory and Practice (3)

9 units

One design-related course approved by the director:

12 units

Courses pertinent to the program are listed in the USC Catalog.

TOTAL

30 units

GRADUATE CERTIFICATE IN SYSTEMS ARCHITECTURE AND ENGINEERING (SAE Certificate)

The SAE Certificate is designed for practicing engineers engaged in the creation and design of complex innovative systems, in aerospace and commercial fields. Courses taken for the certificate may be applied to the MSSAE with faculty approval.

Required Courses (choose 4 from the following)

12 units

SAE 549 Systems Architecting (3)
ISE 460 Engineering Economy (3) OR
ISE 561 Economic Analysis of Engineering Projects (3)
ISE 515 Engineering Project Management (3)
ISE 541 Systems Engineering Theory and Practice (3)
ISE 542 Advanced Topics in Systems Engineering (3)
ISE 544 Management of Engineering Teams (3)

Electives

3 units

One 3- or 4-units elective course shall be taken from the list of those approved for the MSSAE.

TOTAL

≥15 units

MASTER OF SCIENCE IN SYSTEM SAFETY AND SECURITY (MS SYSS)

This interdisciplinary program educates students in modeling risks and consequences of random events, and the development of strategies to improve system safety and system security. Program is aligned with the research agenda of the newly created Center for Risk and Economic Analysis of Terrorism Events. Program requires a set of core courses in risk and economic assessment, and permits specialization in an application area. Program is available via distance education, and is targeted at professional employees in the aerospace industry.

Although this program is interdisciplinary in nature, the MS degree is offered under the jurisdiction of the Industrial and Systems Engineering Department.

Pre-requisites –

Students are expected to have taken the following courses prior to enrolling in the program. Deficiencies can be resolved after admission by taking pre-requisite courses.

ISE 460	Engineering Economy or Equivalent
Math 408	Mathematical Statistics or Equivalent

Required Core courses: (17 units)

ISE 550	Engineering Management of Government Funded Programs (3 units)
ISE 561	Financial and Economic Decision Making (3 units)
ISE 562	Value and Decision Theory (3 units)
PPD 501	Public Sector Economics (4 units)
PPD 587	Risk Analysis (4 units)

Concentration

Select 3 courses from one category below

(D) Cyber-Security: CSCI 530, CSCI 551, CSCI 555, CSCI 577a, CSCI 578; CSCI 556, CSCI 558L (concentration expects undergraduate degree in computer science or equivalent)

Environmental Security: CE513L, CE 523, CE554, ENE 510, ENE 516, ENE 518, ENE 535, ENE 580 (concentration expects undergraduate degree in environmental engineering, environmental studies or equivalent)

Critical Infrastructure: CE465, CE554, CE 560, CE 583, CE 589, EE510, EE516, EE525, EE550

Policy and Planning: PPD 541, PPD 542, PPD 554, PPD 555

Structural Safety: CE480, CE529a, CE536, CE541a, CE554, CE555, CE560 (concentration expects undergraduate degree in civil engineering or equivalent)

(D) Systems: SAE 549, ISE 525, ISE 541, ISE 542, ISE 544

(D) – Concentrations can be completed on the School of Engineering Distance Education Network (DEN).

Electives

An elective is selected under approval of advisor to reach a minimum graduation requirement of 29 units.

GRADUATE CERTIFICATE IN SYSTEM SAFETY AND SECURITY (SYSS Certificate)

The graduate certificate is an abbreviated interdisciplinary program that educates students in modeling risks and consequences of random events, and the development of strategies to improve system safety and system security. Program will be aligned with the research agenda of the newly created Center for Risk and Economic Analysis of Terrorism Events. Certificate includes the core courses of the Masters in System Safety and Security, but does not permit electives of specialization. Program is available via distance education, and is targeted at professional employees in the aerospace industry.

Although this program is interdisciplinary in nature, the certificate is offered under the jurisdiction of the Industrial and Systems Engineering Department.

Admission Standards: Applicants to the program are expected to have a degree in engineering, science or equivalent with undergraduate course work in engineering economy and statistics. Students are expected to have a bachelor's degree from accredited institution with a GPA of at least 3.0 on a 4.0 scale and a score of at least 650 for the quantitative portion of the GRE test, and 400 on the verbal portion of the test, as a minimum. Admitted students who do not meet the course work requirements will be assigned courses to complete the deficiencies.

Pre-requisites

ISE 460	Engineering Economy or Equivalent
Math 408	Mathematical Statistics or Equivalent

Required Core courses:

ISE 550	Engineering Management of Government Funded Programs (3)
ISE 561	Financial and Economic Decision Making (3)
ISE 562	Value and decision theory (3)
PPD 501	Public Sector Economics (4)
PPD 587	Risk Analysis (4)

Total units for certificate: 17

ENGINEER IN INDUSTRIAL AND SYSTEMS ENGINEERING

The Engineer degree is designed for students who want to extend their coursework, but do not want to complete the research requirements of the Ph.D.

Prerequisites

A Master of Science degree in engineering, or completion of a minimum of 27 units of graduate engineering courses, plus all prerequisite courses for the Master of Science in Industrial and Systems Engineering.

Course Requirements

The engineer degree requires a minimum of 30 units of graduate course work beyond the Master of Science degree; up to six units at the 400 level may be counted at the discretion of the student's guidance committee if the committee finds them necessary for the student's program. The course work must form a balanced program of study leading to a definite concentration in two fields of engineering, a minimum of 12 units in one field, nine in another; nine units are elective and may be taken outside the School of Engineering, but must be acceptable for graduate credit. The distribution of course work will be governed by the student's guidance committee and should be considered in conjunction with the course work done for the Master of Science degree. A candidate for the engineer degree may substitute a project under the supervision of a faculty member for six units of course work. In order to have the project credited toward the degree, the student must register in 690 during the course of the project; total 690 registration should be six units. A student wishing to work on a project must make arrangements with a member of the faculty to supervise and evaluate the work, and obtain the approval of the committee chair prior to completing more than 15 units of course work. In many cases, the project may be related to the candidate's work outside the university, but must still be supervised by a faculty member. Distribution of the course work should take into account the nature of the project.

Course work for the EISE is distributed as follows:

- 12 units in an ISE area of concentration
Technical Economic Planning, Human Factors Engineering,
Production Engineering, Systems Engineering, or Operations Research
- 9 units in an ISE area of concentration not already chosen, or in another engineering department
- 9 units in an ISE area of concentration not already chosen, in another engineering department, or in a non-engineering department
- 6 units of ISE 690 to satisfactorily complete a professional engineering project (optional)

Grade Point Average Requirement

Students must maintain an overall 3.0 GPA on all 400-level and above work attempted at USC beyond the bachelor's degree to graduate. A minimum grade of C (2.0) is required in a course to receive graduate credit. Transfer units count as credit (CR) and are not calculated in the GPA.

Residence Requirement

A candidate must complete the last four units of course work at USC. At least 26 units must be taken in residency at USC.

Guidance Committee

After being granted graduate standing the student must form a guidance committee. The committee is made up of three full-time faculty members who are specialists in the student's areas of concentration, with at least two from the major department. Forms for appointment of the committee are available from the Graduate Study Office. The student is responsible for finding a faculty member from one area of concentration who will act as the chair of the

guidance committee. The chair will assist in selection of the other members. Advisement of the student after formation of the committee will be by the committee chair. Students must meet with their committees at least once per year.

The guidance committee chair and members equally share advisement responsibilities and together maintain the quality of the program. The chair is responsible for maintaining the student's advisement file, keeping it up-to-date and complete with all documentation.

Study Plan

With the advice of the guidance committee, the student should lay out a study plan listing all courses to be taken toward the degree and when the courses will be taken. The study plan should form a coherent body of course work fulfilling the student's academic and professional objectives. Changes in the study plan must be approved by the guidance committee.

Qualifying Examination

The student must satisfactorily complete an engineer's qualifying examination administered by his or her guidance committee. This examination will cover both areas of concentration and will consist of at least one written and one oral examination. This examination is normally taken during the last semester of course work toward the degree. Students who choose to take the examination in the semester following the completion of course requirements may do so until the end of the third week of classes without registering. After that date students must register for GRSC 800 to maintain continuous enrollment in the program. Results of the examination are reported to the Graduate Study Office and forwarded to the Office of Academic Records and Registrar.

The qualifying examination is given strictly on a pass/fail basis. Students must be unanimously passed by the guidance committee. Students may not be conditionally passed. Students who fail the examination may, at the guidance committee's discretion, retake the examination not sooner than six months following the first exam. The exam may only be taken twice.

Transfer Credit

Four units of graduate course work may be transferred from an accredited institution toward the Engineer degree. Transfer work must have been done after receiving the M.S. degree and must be approved by the guidance committee.

Reserving Course Credit

A student who receives the Master of Science degree at USC may reserve a limited number of units taken prior to the receipt of the Master of Science degree for credit toward the Engineer degree. To reserve credit, the course must have been taken during the last semester as a Master of Science candidate, not used toward the Master of Science degree, be acceptable to the guidance committee, and approved by petition to the graduate study committee of the School of Engineering.

Time Limit

The student must complete all requirements within five calendar years.

Admission to Candidacy

After satisfactorily completing the qualifying examination and no later than the beginning of the last semester of course work, the student must file for candidacy. This is a separate and distinct step which sets forth the entire academic program fulfilling the degree requirements and is used as a working basis for awarding the degree.

Changes to the Academic Program

After admission to candidacy, any changes in the proposed academic program must be approved by the Graduate Study Committee. Petition forms are available from the Graduate Study Office and must be endorsed by the guidance committee.

Graduation

At the beginning of the last semester, students should file an Application for Engineer's Degree with the Graduate Study Office. This will alert the School and the University that you are prepared to receive your degree and initiate the degree check process, verifying that all academic and administrative requirements are met.

Transfer to the Doctor of Philosophy Program

Students registered for the Engineer degree may still elect to undertake a Doctor of Philosophy program. A supplemental Application for Graduate Admission must be filed with the Office of Admission.

ACADEMIC HONORS

Academic Awards

The Department and the School of Engineering may, from time to time, nominate students for awards and scholarships. If you feel you may qualify for any award or recognition based on academic performance, leadership, extra-curricular activities, or any combination of the above, please let the Department know. We are always happy to give you the recognition you deserve.

STUDENT ORGANIZATIONS

To build character and leadership skills, and to acknowledge academic achievement, the ISE Department supports the activities of three student organizations: the Student Chapter of Institute of Industrial Engineers; Alpha Pi Mu; and Omega Rho. These organizations are run by ISE students to further academic and professional goals. Each organization has an ISE faculty member as an advisor. The quality of each of these organizations is directly affected by the quality of its student members, and particularly its officers. Your active participation is, therefore, encouraged. Interested students should contact the Educational Services Coordinator for details.

Student Chapter of the Institute of Industrial Engineers

The Institute of Industrial Engineers is the professional organization for industrial engineers. Its mission is to promote and foster industrial engineering as a profession. Reduced membership dues are available to student members.

Alpha Pi Mu

Alpha Pi Mu is the industrial engineering honors society. Its purpose is to recognize high academic achievement by juniors, seniors, and graduate students in industrial engineering. Membership is by invitation only.

Omega Rho

Omega Rho is the operations research honors society. Its purpose is to recognize high academic achievement by undergraduate and graduate students in operations research. Membership is by invitation only.

ISE FACULTY

Barry Boehm, Professor

Ph.D., 1964, Mathematics, University of California, Los Angeles
Joint with Computer Science

Yong Chen, Assistant Professor

Ph.D., 2001, Computer Aided Engineering & Design, Georgia Institute of Technology

Elaine Chew, Assistant Professor

Ph.D., 2000, Operations Research, MIT

Maged M. Dessouky, Associate Professor

Ph.D., 1992, Industrial Engineering and Operations Research, University of California at Berkeley

Randolph W. Hall, Professor

Ph.D., 1982, Civil Engineering, University of California at Berkeley

Behrokh Khoshnevis, Professor

Ph.D., 1979, Industrial Engineering and Management, Oklahoma State University

Stephen C-Y. Lu, Professor

Ph.D., 1984, Carnegie-Mellon University
Joint with Aerospace and Mechanical Engineering

Najmedin Meshkati, Associate Professor

Ph.D., 1983, Industrial and Systems Engineering and Management, University of Southern California
Joint with Civil Engineering

James Moore, II, Professor and Chairman

Ph.D., 1986, Civil Engineering (Infrastructure Planning and Management), Stanford University
Joint with Civil Engineering, and School of Policy, Planning and Development

Gerald Nadler, Professor Emeritus

Ph.D., 1949, Industrial Engineering, Purdue University

Fernando Ordóñez, Assistant Professor

Ph.D., 2002, Operations Research, MIT

Kurt Palmer, Assistant Professor

Ph.D., 1998, Industrial and Systems Engineering, Georgia Institute of Technology

Mansour Rahimi, Associate Professor

Ph.D., 1982, Industrial and Systems Engineering, Virginia Polytechnic Institute and State University

Sheldon Ross, Professor

Ph.D., 1968, Statistics, Stanford University

F. Stan Settles, Professor

Ph.D., 1969, Industrial Engineering, Arizona State University

Detlof von Winterfeldt, Professor

Ph.D., 1976, Mathematical Psychology, University of Michigan, Ann Arbor

Maria Yang, Assistant Professor

Ph.D., 2000, Mechanical Engineering, Stanford University
