

## **SPSS for Windows, XP and Windows Vista Installation Instructions for Release 16.x**

**This packet contains instructions for installing SPSS for Windows on a PC that is running Windows XP and Windows Vista. For other versions of Windows, SPSS 15.X is still available.**

**Instructions inside this packet include an important page describing how to obtain Patches to upgrade SPSS for Windows to higher Release levels. Since SPSS doesn't always release every level on CD-ROM, there may be upgrade patches already available for the software you are now about to install.**

**Please note that for Windows Vista You must run the installation with Administrator account.**

**Numbers needed during installation:**

**CD-ROM Serial Number: 9798421**

**Authorization Code: <--code is printed on CD-->**

**To receive an individual, unique License Code from SPSS Inc. (needed for each standalone machine on which SPSS is installed), first run the installation program from the CD.**

**You can request the License Code from SPSS either during the installation, or by running the License Authorization Wizard (from Start > Programs > SPSS for Windows) after SPSS is already installed. SPSS for Windows will function for 14 days without the License Code. The Wizard tells you how to submit the Authorization Code to SPSS, then they send you back your individual License Code.**

**Additional Number (not used during installation)**

**SPSS Customer Id 100496177**

**SPSS documentation is now included on the CD itself in PDF format, and is located in the \manuals folder.**

**SmartViewer™ is a standalone package that allows one to view and manipulate SPSS Output files. There is no need to install this standalone, as all SmartViewer™ functionality is included automatically in the SPSS Base installation. For more information about SmartViewer™, visit**

**<http://www.spss.com/spssbi/smartviewer/>**

**If you have questions about the installation process, or if you have questions or problems running SPSS for Windows after it is installed, please call the ITS Customer Support Center at 213.740.5555.**
