Faculty Cluster Recruitments in Biomedical Nanoscience

The University of Southern California (USC) is seeking to hire outstanding senior scholars to provide leadership for its university-wide research initiative in biomedical nanoscience. We wish to hire faculty who are innovative, entrepreneurial, and interdisciplinary leaders with a clear vision for the most exciting future research in nanoscience that contributes to human health. Faculty may apply either as individuals or as groups, within any of the university's schools. We are particularly interested in hiring faculty who can think boldly and work in non-traditional ways to bridge research across disciplines.

Located in the heart of Los Angeles, the University of Southern California is one of the world's leading private research universities. Participants in the biomedical nanoscience initiative span the university, and include Children's Hospital Los Angeles, the Norris Comprehensive Cancer Center, the High Performance Computing Center, the Biomimetic MicroElectronic Systems Center, the Information Sciences Institute, the Center for Electron Microscopy and Microanalysis, Center for Stem Cell and Regenerative Medicine (CSCRM) and the Zilkha Neurogenetic Institute.

More information about the initiatives and the hiring process are available at <http://www.usc.edu/research/initiatives/>. Applications will be considered beginning January 15, 2008. The University of Southern California values diversity and is committed to equal opportunity in employment.
