

Department of
Obstetrics and
Gynecology

Dear Colleague:

Dialogues in Contraception[®] continues to bring you the latest information from experts in the field of women's health and contraception. Their insights and analyses serve as resources for improving comprehensive contraceptive management. At the request of readers, in this volume the Editorial Board has provided discussions of topics including return to fertility after use of reversible contraception, improving continuation with various contraceptive methods, risk of venous thromboembolism with different estrogen-containing methods, advances in the use of intrauterine contraception, and an update on the vaginal ring. In this issue, we address the evidence regarding contraception and cancer and benefits of contraception to women's health.

Enclosed with this issue is the *Dialogues in Contraception* Readership Survey, requesting your feedback and opinions on this newsletter series, including topics you would like to read about in future issues. Please take a few moments to complete and return this survey. Your responses are very important to us and help us to continue to bring you a valuable educational tool with information to help you in your daily practice.

If you would like to share additional thoughts with me and the rest of the Editorial Board, please contact Jaclyn Burkart, Associate Program Director at Health Learning Systems, by phone: (973) 352-2028, or by e-mail: jburkart@commonhealth.com.

We look forward to hearing from you!

Sincerely,

Daniel R. Mishell, Jr, MD
