COURSE DESCRIPTION

Each year, more than one million people are diagnosed with hepatocellular carcinoma (HCC). The incidence in the United States has doubled in the last decade due to the increase in the number of patients with viral hepatitis.

This course is designed to update physicians in the specialties of gastroenterology, oncology, surgery, radiology, pathology, and primary care regarding the surveillance and early detection of hepatocellular carcinoma in high risk populations, current diagnostic modalities, novel therapeutic options, and criteria for liver transplantation.

OBJECTIVES

At the completion of the program, participants should be able to:

1. Recognize populations at high-risk for the development of HCC
2. Describe the natural history of HCC and outcomes of the disease
3. Identify imaging modalities used in diagnosing HCC and interventions used for treatment
4. Distinguish criteria for liver resection and transplantation in patients with HCC
